

Brain Gain vs Brain Drain

Phase 1 “Indian vs Trump H1B visa issue”?

\$1,000 to \$100,000. -But no... I’m not here to debate Trump policies 😊

👉 Instead, let’s look at the bigger picture.

Did you know 71% of H1B visa holders in the US are Indians?

Our people are literally running global companies — take Sundar Pichai at Google, Satya Nadella at Microsoft, and many more.

Now here’s the question to us :

If Indians are earning so much money in America, does it actually help India?

The answer is — Not really.

This is where we talk about **Brain Gain vs Brain Drain**.

➡ Imagine this: If India exports **rice**, we get profit in **USD**. That’s a **Gain**.

But when India invests in education, subsidies, privileges, IITs — and those students settle in the US — it’s a drain.

Yes, as individuals we can be proud that Indians are succeeding abroad. But as a country, India is **losing**.

🇮🇳 As per surveys, **India loses almost ₹1.8 lakh crore** because of brain drain.

Again Think about Sundar Pichai’s story.

He studied at IIT Kharagpur, which was funded by Indian taxpayers.

But his talent and career growth mostly benefitted the US economy.

So India invested, but America gained.

Now, are they talented? **Yes**.

Do they deserve those jobs? **Absolutely**.

But who created that talent??

It’s India — the environment, the education system, the resources.

That’s exactly why brain drain is a huge challenge for us. 🌟

(If Indians come back to India, the “loss” actually flips — because MNCs can open branches here, and India will gain the profit. 😊)

Look at China for example: many Chinese studied abroad and then came back. That’s how they became so unique and globally competitive. They didn’t just rely on foreign apps — no WhatsApp, no Facebook even no google. Instead, they built and used their own products like Baidu, WeChat and BYD.

Solution

If we play smart, India can do the same — bring back talent, create our own solutions, and turn brain drain into brain gain! 🌟)

Phase 2 Brainiac

If take any classes not everyone brainiac

The **10%** student's only can be brainiac

Remaining **90%** student must **be average like me!!**

Now that 10% people works in india they help the remaining 90% people

(For example (**peer teaching**) your friend teach the topic better than your professor)

ð As per survey 94-95% engineering graduates are actually not engineers (times of india)

:: So bro do you say Indians don't go abroad for work ?? **Noo**

But!!! At same time (talk about the Indian tax system)

(Company’s nepotism)

If I sundhar works in reliance, tata or mahindra , aditya birla he can be CEO ?
never ! most of companies works in india as a family asset not work as company
(problem : no Innovation impactable growth only they can gain money)

kutty story talk about the my inspiration (Fair Child Semiconductor *#board# {8 traidores}*
william shockley _ gordonmoore (intel) robert noyce (amd) commnuisam)

come to the point (research facilitate(import duty) All R okay (civic secnce) - 5C Lambo
Haracan (v10 eng , 602bhp & 80000rpm & 560Nm torque) **TAX**

Abroad - tax system better, better life style , even better gender quality

But choose wisely be in india or abroad that’s induvals choice .

WB even we can’t force inducals choice then however i can! thank lot

So moral of the story —

**Don’t just dream to earn,
dream to return something to your people ♥ WB I was!**
